

Abstract

Disclosed is a hygienic absorbent article including a back layer, an absorbent layer, and a three-dimensional portion. The three-dimensional portion rises in a T-shaped state over the absorbent layer because of the longitudinal elastic contractive force of elastic members disposed within the three-dimensional portion. The three-dimensional portion has connecting portions fixed onto the absorbent layer and a skin-contactable portion connected to the absorbent layer through the connecting portions and having a pair of free ends.
